Any passport applications made should continue to allow 3rd options for gender identification, apart from only Having "Male" or "Female's. Biologically speaking, intersex persons, those who have more or less chromosomes than what could be considered "male" or "female", and need to have another option, as was already decided in the U.S. District court case Zzyym v. Blinken (formerly Zzyym v. Pompeo, Zzyym v. Tillerson, and Zzyym v. Kerry). Removing this option would cause undue pain and hardship for internationally traveling Amercian citizens, and thus should not be done.

Thank you.
