The proposed changes unfairly discriminate against the marginalized for no discernable benefit to anyone. These changes are based on a fundamental misunderstanding of human psychology and biology, as well as being an infringement upon the rights of Americans to freely express themselves. These changes also run in direct violation of *Zzyym v. Blinkin*. To make these changes in violation of the law because of the desires of a man with little to no advanced knowledge of human biology would be a complete violation of the principles the country was founded upon.
