It is my understanding that gender as a field is going to be treated the same as sex. The two are separate things and treating them as the same is not only a disservice to citizens, it is scientifically incorrect and sets the US apart from most other comparable nations.

Futhermore, the definitions of biological sex as set forth in Executive Order DWfGIEaRBTtFG excludes intersex individuals, sterile individuals and by denoting that sex is defined by attributes "at conception" that do not exist at conception - the entire definitions are incorrect. No one would qualify as male or female as described in those definitions.

This update to the Passport Renewal form in this manner will do harm to many US citizens.
