These changes should not be made to this form. These changes ignore the latest accepted, peer reviewed medical research regarding sex and gender, as well as ignores the existence of intersex people. Changing the forms is a waste of time and money to the American taxpayer, while ignoring medical reality. For example, one in fifteen thousand people is born with 45,X/46,XY mosaicism, which can result in unclear sex at birth. That's about twenty four thousand people who can't fill out this form, and that is only one kind of intersex condition. I personally do not want my tax dollars to go towards ignoring medical research for the purpose of excluding people from obtaining passports as is their legal right.
