Hello, I would like to express my opinion regarding sex and gender listed on a U.S. passport. While it is true that biological sex only refers to male and female for human beings, gender is entirely different. Gender identity is not biological, it is not genetic. Gender is a form of expression and self identity, it is not something that should be regulated by a governing body. When someone identifies as a gender that is different from their biological sex, it will likely also cause a change to their appearance. Having a photo of someone who looks different to what is listed on their passport cannot possibly make gov't officials or TSA's job easier. Allow people to put the appropriate gender on their passport.

Thank you.
