I do not agree with this policy, as a part of the queer community, and the public. An anti-trans policy will impact the services provided by the policy maker/enforcer negatively, and should not be supported. This shuns a persons right to make their own identity, and build their own person. The policy is incredibly shameful and invasive to the targeted persons privacy. Ones own identity and regulation of legal documents should pertain to the person in question and whom ever they must go through to alter or create these documents, with this in mind, this policy becomes unethical and unconstitutional to uphold.

The image provided below is of the constitution. In this image, i have highlight a few sections. These sections are extremely important, as they state an American's right to general welfare and the right to domestic tranquility. Enacting, or continueing to enact this policy would sew unrest among the queer community, making us, as citizens of the United State of America, unable to acces the domestic tranquility that has been promised us. You, as a company fuctioning in America, and thus having to follow American laws, and respect the Constitution, would be in contempt of the best interest of the people you service with your company, as per the wording of the Constitution.
