Transitioning from male to female marked a profound improvement in my mental health and overall quality of life. Before I transitioned I was suffering from depression and abusing alcohol. Now I barely drink at all, got selected for an amazing and competitive role at work, and I am full of hope and optimism for my future.

My positive turnaround in life is thanks in large part to the option I had of correcting and updating my passport data! This important document does not only grant me safe and unmolested travel; it also served as required verification that I needed and used for updating other personal documents such as my SSN, driver's license, and military ID. And without all the proper documents I never could have started the medical treatments that have so wonderfully impacted my life.
