I object to the proposed change of the form from "gender" to "sex". It is scientifically undeniable that biological sex is not binary, and people come with various combinations of chromosomes that don't conform to the most common "male" or "female" definitions. Gender is a very personal matter, and every person should be entitled to identify themselves as they see fit. Such choices harm no one and are none of anyone else's business. Please do not make this change.
