These proposed changes do nothing to protect women, and are a clear violation of one's own personal freedoms of expression and identification. Not only that, but they will make over a million US citizens have conflicting government documents, which might restrict their travel or put them in danger. Sex and gender are not the same, and many citizens are intersex and do not fit the "male" or "female" molds. These changes target transgender and intersex citizens unfairly and do absolutely nothing to protect women. This would be a giant step back for this country, it is pathetic and sad to even suggest.
