I do not agree with the new proposed changes for a passport application. Changing 'gender' to biological 'sex' at birth is not needed to ensure the safety of the country or to ensure safe passage of the individual applying for a passport. This proposed change is especially egregious for those people who identify strongly with a specific gender that doesn't coincide with their sex at birth. All citizens have the right for safe passage out and back into their native country regardless of how they define or identify themselves.
