Changing gender to sex on the passport application and requiring it to be "biological" sex will affect me personally, along with many other people that I know. I am a transgender man and have been living as such for 5 years. All of my documentation has been changed including my birth certificate, social security, and state license. Requiring "biological" sex on these forms will not only make my documents not match, but will be incorrect. Not everyone is born F or M at birth. Intersex people do exist and this puts undue stress on those people. Having an incorrect gender marker on your passport is dangerous for many people as they travel.
