Citizens should be able to submit passport changes for name change, data correction, and gender change. We should also consider removing gender from the passport altogether. We do not put people's other biological characteristics on there, so why put sex? There is already a requirement for a photo. This should be sufficient for identifying the person. People today should be able to change their sex and update their passport to match or correct it. In the case of my sister, she was born XX female and never had a sex change, but her birth certificate had an error and says male. She should not have to put male on her passport so that it matches her incorrect birth certificate. My trans friends and family should be able to match their documents to who they are currently too without having to match their birth certificate.

Please allow citizens to update their passports with their current name changes, gender changes, or data corrections. And please consider removing sex from passports - we don't need this information.
