This collection is much needed in order to verify statistical data accuracy and validation of results reported. This will allow for the improvement of the process and confirmation of results for important testing and technology development. The comparison of existing archived data that exists will ensure quantitative calculations made against actual performance. It will also provide the necessary framework for measuring the effectiveness of the data analyzed. The confidence in reporting results and reliability are the upmost critical factors that will determine best practices for future studies to advance technology development.
