## General Comment

MSHA-2025-0015-0001 1219-0054

The agency collection should be revised to update the agency to the proper agency management for MSHA regulation changes. The list of collection items are needed for safety purposes for health, fire prevention and having a plan in place in case of an emergency. Having the fire extinguishers tested and available every 6 months and verification of all warning systems, are all requirements applicable for policies issued by the Director of the agency. These policies should reference certification requirements, testing records with maps and locations, and other relevant data requirements for each mandatory system. The emergency evacuation and firefighting instructions should be required as part of regulatory compliance policies and procedures.
