## General Comment

I recommend transitioning to all green renewable energy, because it is too expensive in lives, environmental damages, and treasury to produce and burn fossil fuels.

I also recommend to not mine the ocean floor for obvious costly environmental reasons. There is no energy emergency or crisis, just like there was no immigration crisis. Declaring an energy emergency is a red herring.

The only crisis and emergency is climate change and global warming created by producing and burning fossil fuels. Instead of fixing the true crisis the DOI is making it worse.
