Your math is suspect.

2,183,460 - Estimated total number of annual responses

301 hours - Estimated time per response

118,863 - Estimated total annual burden hours

But ...

$$2,183,460 \times 301 = 657,221,460$$

The estimated total annual burden hours should be 657,221,460 and not 118,863.

Also, for some unknown reason, you have estimated the total number of annual responses to be exactly the same as the estimated total number of annual responses for casino records. That cannot be correct.
