Your math is suspect. You used the following estimates:

72 - Estimated total number of annual responses
45 minutes (0.75 hours) - Estimated time per response
156 hours - Estimated total annual burden hours

But ...
 $72 \text{ responses} \times 0.75 \text{ hours per response} = 54 \text{ hours, not } 156 \text{ hours.}$

Thank you
