General Comment

I am commenting on a Notice by the FDA regarding Agency Information Collection Activities; Proposed Collection; Comment Request; Sanitary Transportation of Human and Animal Food. Transportation of human and animal food is a critical time in which the safety and sanitation of food can be compromised. Foods' whereabouts, location, time, humidity, light exposure, and temperature should be traceable in real time. Alerts should be sent in real time if any component being monitored is moving closer to the outer range of the normal specification ranges set for each food type. If any levels are threatened, the food manufacturer should take immediate steps to maintain safe components for the food item, or dispose of food item if component was measured outside of its safety specifications. All of this information should be made available to the agency for inspection and/or review at any time. The food manufacturer should contact the FDA when components have been measured outside specifications.
