**RE: Agency Information Collection Activities: Proposed Collection: Public  
Comment Request; Information Collection Request Title: Shortage Designation  
Management System, OMB No. 0906-0029-Extension**

*Submitted via: [paperwork@hrsa.gov](mailto:paperwork@hrsa.gov).*

Dear Administrator Engels:

Northeast Valley Health Corporation (NEVHC) is a federally qualified health center that provides comprehensive primary, dental, and behavioral health services to over 83,000 medically underserved populations throughout the San Fernando and Santa Clarita Valleys.

As you know, Community Health Centers are the best, most innovative, and resilient part of our nation's health system. For nearly sixty years, health centers have provided high-quality, comprehensive, affordable primary and preventive care. In addition to medical services, CHCs provide dental, behavioral health, pharmacy, vision, and other essential health services to America's most vulnerable, medically underserved communities in urban, rural, suburban, frontier, and island communities. For over fifty years, NEVHC has provided quality healthcare services to the community through its 18 health center locations. Our mission is to deliver safe, comprehensive, and culturally sensitive primary care to medically underserved residents of Los Angeles County. The populations we serve face significant barriers to accessing care, often rooted in economic, social, and geographic factors. For instance, more than 91% of NEVHC patients live at or below 200% of the federal poverty level, making healthcare unaffordable for many. Additionally, communities in the San Fernando and Santa Clarita Valleys suffer from physician shortages, further limiting access. To address these challenges, NEVHC offers care on a sliding fee scale, helps patients enroll in health insurance, and provides a wide range of services beyond primary care.

An essential component of becoming a CHC is being located in a Medically Underserved Area (MUA) or serving a Medically Underserved Population (MUP), which then automatically designates these entities as Health Professional Service Areas (HPSAs). As designed, HPSAs, MUAs, and MUPs assist communities with the most significant barriers to care, enabling policies and incentives to attract essential providers and resources that bridge the gap.

As highlighted in the Make America Healthy Again agenda, CHCs are well-positioned to be leaders in expanding access to primary care across the country and addressing chronic diseases. These designations are essential to the health center mission, guiding our resource allocation, service expansion, and funding to ensure care for the communities that need it most. NEVHC appreciates the opportunity to comment on the Information Collection Request regarding the Shortage Designation Management System, and we look forward to working with HRSA on this topic.

## **I. The Value of Community Health Centers**

CHCs are uniquely positioned to address the nation's growing primary care gap while simultaneously delivering substantial cost savings to the healthcare system. According to NACHC's report, "Closing the Primary Care Gap,"<sup>1</sup> over 100 million Americans (one-third of the nation) lack access to a usual source of primary care due to a shortage of providers in their communities. These individuals are considered medically disenfranchised and include people of all income levels, locations, ages, races, ethnicities, and insurance status. Many of these individuals have insurance but are still unable to access care in their community due to a shortage of providers. Without health centers, 15 million more patients would be at risk of going without primary care.<sup>2</sup>

CHCs serve as a critical access point for comprehensive, affordable health care, particularly for underserved populations. CHC patients are four times more likely to have incomes at or below the Federal Poverty Level (FPL) and twice as likely to have income under 200% of FPL than the U.S. population.<sup>3</sup> Health centers provide care to all patients, regardless of their ability to pay, and evaluate uninsured and underinsured patients on a sliding fee scale to help lower the cost they pay for services based on family size and income. In 2023 alone, health centers also served 1.47 million homeless individuals, 6.55 million patients residing in public housing, 1.03 million agricultural workers and families, and 419,000 veterans.<sup>4</sup>

This preventive care model not only improves health outcomes but also reduces costs. The Department for Health and Human Services (HHS) estimates that CHCs save \$1,411 per adult and \$741 per child enrolled in Medicaid, contributing to \$11.4 billion in gross Medicaid savings.<sup>5</sup> These savings are achieved by reducing reliance on costly emergency departments and specialty care, lowering prescription drug spending, and better managing chronic diseases.<sup>6</sup> In fact, costs for health center patients with Medicaid coverage have been found to be lower than costs for non-health-center Medicaid patients by 8.4%<sup>7</sup> to 24%.<sup>8</sup>

<sup>8</sup> Nocon et al., (2016).

Health centers have also shown success in reducing chronic disease burden through early detection and ongoing management. In 2023, health centers significantly increased screenings for breast cancer (52.5% Urban, 52% Rural), cervical cancer (57.2% Urban, 48.1% Rural), and colorectal cancer (40.2% Urban, 42.7% Rural),<sup>9</sup> demonstrating their commitment to early detection and prevention. From 2022 to 2023, as the overall patient population grew by 3%, health centers also saw notable increases in patients diagnosed with and treated for chronic conditions, including asthma (6%), chronic lower respiratory diseases (5%), diabetes (6%), heart disease (8%), hypertension (5%), and obesity (11%). These efforts reflect a holistic, patient-centered approach that not only improves community health but also mitigates long-term healthcare spending.

Despite operating on razor-thin margins, health centers continue to demonstrate their value by delivering high-quality, cost-effective care to millions of Americans while contributing to local economies by creating jobs and generating income. One study found they support over 650,000 total jobs and create more than \$118 billion in total economic impact.<sup>10</sup> Health centers' proven ability to address unmet care needs, reduce healthcare costs, and improve community health outcomes make them an integral part of the solution to our nation's primary care crisis

## **I. Medically Underserved Areas & Medically Underserved Populations Designations**

HRSA established these designations specifically to support the development of health maintenance organizations and CHCs in communities where care is limited.<sup>11</sup> Consequently, under Section 330 of the Public Health Service Act, health centers are explicitly defined as entities that serve medically underserved populations.<sup>12</sup> This makes MUA and MUP designations essential, not only in the establishment of health centers, but also foundational to the policy and operational framework of health centers. These designations can help CHCs strategically plan service area expansions and new site locations and assist staff in developing care to meet the needs of their patients.

Unfortunately, many of the communities health centers serve experience a lack of access to essential services connected to healthcare due to living in areas designated as pharmacy and food deserts. Although pharmacies are often considered one of the most accessible care settings, an estimated 15.8 million (4.7%) Americans reside in a pharmacy desert, spanning both urban and rural settings in all 50 states.<sup>13</sup> Individuals living in pharmacy deserts are often underserved groups who have historically faced barriers to care. One study found that pharmacy deserts exist at similar rates in both MUA and non-MUA urban areas, indicating that primary care access does not always correlate with access to pharmacy services.<sup>14</sup>

Food deserts present another critical challenge. In communities with limited access to affordable, healthy foods, residents have heightened risks of diet-related chronic diseases. Generally, limited access to nutritious food is more common in communities with higher rates of poverty, whether rural or urban, communities with greater shares of people of color, and rural American Indian or Alaska Native communities.<sup>15</sup> With food insecurity in the United States rising in recent years<sup>16</sup>, health centers have stepped in to bridge the gap between food and health. Through innovative partnerships and culturally competent interventions, many CHCs now offer food prescription programs, community gardens, and connections to food assistance services.

Without the funding and support tied to MUA/MUP designations, health centers would be severely limited in their ability to address broader social risk factors of health. Pharmacy and food deserts would deepen, the chronic disease epidemic would rise, and patients already facing barriers to care would encounter even greater health disparities. MUAs and MUPs not only enable the existence of CHCs, but they also allow health centers to be responsive, adaptable, and effective in meeting their community's health needs.

## **I. Health Professional Shortage Areas Designations**

Health centers are the foundation of the nation's health professional shortage areas. By statute, CHCs are designed as Automatic Facility HPSAs (Auto-HPSAs) due to the nature of their work and the medically underserved populations they serve. The designation is not merely administrative; rather, it is essential to health centers' ability to operate and deliver high-quality care in areas of high need. HPSA designations recognize that health centers are integral to maintaining access to primary and preventive care in the areas that need it most. These designations provide access to federal resources that enable CHCs to continue serving their patients, and without them, many health centers would be unable to operate in their communities.

A HPSA designation also qualifies health centers to apply for and receive National Health Service Corp (NHSC) clinicians. In 2024, more than 9,000 NHSC clinicians served at CHCs, providing care to more than 21 million patients across the country.<sup>17</sup> This program is a critical workforce pipeline for CHCs and has more than doubled the health center workforce between 2010 to 2021.<sup>18</sup> Despite this growth, workforce shortages remain, particularly in rural and high-need areas. HPSA designations are essential to maintaining CHC eligibility for NHSC staffing and addressing provider shortages in the areas they serve. Given persistent healthcare workforce shortages, market competition, provider burnout, and early retirement, health centers heavily rely on the NHSC program to recruit and retain their workforce. Loss of their designation would compromise access to providers, reduce service availability, and ultimately harm the patients and communities that CHCs serve.

Health centers have a long-standing record of delivering high-quality care to complex, underserved populations and rely on the support tied to HPSA, MUA, and MUP designations to sustain those services. Thank you for your consideration of these comments. We look forward to working with the Administration on this topic. If you have any questions, please feel free to contact [JulieLeyba@nevhc.org](mailto:JulieLeyba@nevhc.org).

Sincerely,

A handwritten signature in blue ink that reads "Kimberly Wyard".
