Subject: Fw: public comment on federal register washington monument not built very well to withstand earthquakes - we need to upgrade here

Subject: washington monument not built very well to withstand earthquakes - we need to upgrade here

it seems to me it is time to upgrade the standards from 1977 - which is 36 years ago. we have had several earthquakes in the east lately causing alot of damage. it is clear that ourstandards need to be upgraded. we need higher standards in building. we also need better standards for flooding and the extreme weather that is coming via climate change - extreme weather.

it seems to me the people at this agency are lazy and failing to keep up with the times. 36 years ago should have called them into action to mandate better protection for buildings. sometimes it might be the only building standing. its time to build for the future extreme weather. this comment is for the public record. jean public
