Dear Ms. Peterson:

Forest Energy Corporation is pleased to submit comments in response to the Energy Information Administration's proposed Densified Biomass Fuel Report, Form EIA-63C.

We support EIA's effort to collect information on the densified biomass industry and commend EIA for this effort. We believe this is a great addition to providing a complete picture of the energy situation in the US. Although this will take some effort to assure we provide you consistently accurate information, we are pleased to be a part of this effort and look forward to the outcome.

I would like to suggest a couple of modifications though. Forest Energy is the only significant producer in Arizona, so any reporting by state will ultimately be a reporting of our data which divulges some information that we would prefer to remain private. We recommend that EIA consider reporting data in no smaller category than regionally. This effort will help preserve our confidentiality. I believe this will also be a benefit for fair competition and a balance to supply and demand.

Forest Energy also manufactures densified logs. They are not yet a large percentage of our production, but do provide many homes fuel for heating.

Thank you for the opportunity to comment. I am pleased to see this effort you your part and look forward to the added information being available for anyone desiring information regarding this renewable energy segment.

Sincerely yours,

R.H Davis
