Re: Annual Survey of Foreign Direct Investment in the U.S. (BE-15)

Dear Ms. Jessup,

I am pleased to respond to the *Federal Register* notice of June 10, 2015 concerning the Bureau of Economic Analysis's plan to conduct the Annual Survey of Foreign Direct Investment in the U.S. (BE-15). As a research professor at the George Washington Institute of Public Policy, I focus on policies that promote U.S. economic competitiveness; I also serve as a member of the Bureau of Economic Analysis (BEA) Advisory Committee. From these perspectives, I find that the BE-15 survey is particularly important because it provides detailed data on the role of foreign direct investment in the U.S. economy and changes in that role over time.

BRDIS is used by the federal government, state governments, businesses, and researchers to ascertain the dynamics of foreign direct investment in the U.S. and guide attraction programs and investment decisions in light of that knowledge. As the level and nature of foreign direct investment in the U.S. are significant indicators and determinants of U.S. competitiveness, BE-15 data are essential for informed analysis and intelligent decisions.

BE-15 data also are potentially useful in supporting emerging federal efforts to describe global value chains (GVCs) and measure international trade in value-added (TiVA). Gaining the capacity to map the place of U.S.-based establishments in GVCs, by nation of ownership, and measure the contributions of foreign direct investment to U.S. TiVA is highly attractive. It will enable federal and state governments to design more effective business attraction efforts and business development strategies and multi-national firms to make U.S. investments that have a higher likelihood of success.

BEA and the U.S. International Trade Commission (USITC) are representing the United States in a series of multi-national efforts to create and implement a framework and methods for mapping GVCs and measuring TiVA. These efforts are hosted by the Organisation for Economic Cooperation and Development (OECD), the United Nations (UN) Statistical Commission, the UN Economic Commission for Europe, and Asia-Pacific Economic Cooperation (APEC).

To ensure that the design of the BE-15 survey supports and is consistent with these initiatives, I encourage the BEA Direct Investment Division to consult with the BEA and USITC liaisons prior

to submitting the BRDIS information collection request to OMB. In the appendix to this letter, I summarize the various efforts.

I appreciate the opportunity to comment on the proposed BE-15 survey, hope that my suggestion is useful, and look forward to reading BEA's submission to OMB.

Sincerely,

A handwritten signature in black ink that reads "Andrew Reamer". The signature is written in a cursive style with a large initial "A" and a long, sweeping underline.

Andrew Reamer  
Research Professor

## Multi-national Organization Efforts to Measure GVCs, TiVA, and Trade in Services and U.S. Points of Contact

### Efforts to Measure GVCs, TiVA, and Trade in Services

- OECD-World Trade Organization (WTO):
  - Provides [current TiVA estimates by nation](#) -- this is the database that all efforts are seeking to improve
  - Is enhancing these estimates through work of an [expert group](#) creating "extended national supply-use tables" with TiVA characteristics
- [Trade Statistics Branch](#), United Nations Statistical Division--
  - As directed in March 2015 by the [UN Statistical Commission](#) (pp. 20-22), overseeing implementation of [December 2014 report](#) of the Friends of the Chair on the Measurement of International Trade and Economic Globalization (FOC).  
Key tasks:
    - Draft a handbook on a system of extended international and global accounts as the measurement framework for international trade and economic globalization
    - Establish an expert group tasked with the development of the handbook on a system of extended international and global accounts—the U.S. is part of this group
    - Implement a program of work for the measurement of international trade and globalization, namely:
      - Promoting and advancing the creation of a global enterprise group register, building on and taking into account lessons learned from the ongoing EuroGroups Register project;
      - Improving the measurement of firm heterogeneity based on alternative aggregations of microdata and by further developing a classification of business functions, while cautioning against any change in the International Standard Industrial Classification;
      - Addressing asymmetries in bilateral trade and foreign direct investment while building on work already undertaken in several countries and coordinating this effort with work already being done by the Organization for Economic Cooperation and Development;
      - Mainstreaming the development of recurrent global supply-use and input-output tables as undertaken by the Organization for Economic Cooperation and Development in collaboration with other regional and international organizations, with the aim of increasing the coverage of the Organization for Economic Cooperation and Development-World Trade Organization database on trade in value-added

- Conference of European Statisticians (CES), UN Economic Commission for Europe (UNECE)
  - Commissioned the [Guide to Measuring Global Production](#), prepared by the Task Force on Global Production in March 2015:
    - "Global production has evolved and now encompasses a broad range of business arrangements and organizational forms. Today, multinational enterprises (MNE) account for a large share of international trade between countries. National Statistical Institutes (NSI) need to keep track of the changing forms of global production and their effects on international trade relationships. It is important to identify best practices developed by countries and agree internationally on the practical guidelines needed to foster international comparability."
  - Issued a [report](#) of its [June 2015 meeting](#) that "affirmed" the Guide, encouraged its use by nations, "supported the research agenda," and "agreed that the Guide would be updated once the above further work has been completed and in light of the practical evidence collected by that time."
  - In July 2015, the UNECE Group of Experts on National Accounts held a meeting on [Measuring Global Production](#)
    - "In April 2014, the CES . . . decided to create a forum for exchanging experience on data collection and compilation methods in respect to global production arrangements. The CES asked UNECE and the Group of Experts on National Accounts to provide such a forum. The collected country examples and good practices will be used for future updates of the Guide to Measuring Global Production."
  
- Technical Group on Measurement of APEC Trade in Value added (TiVA) under Global Value Chains, Asia-Pacific Economic Cooperation (APEC)
  - At the APEC meeting in the Philippines, May 2015, the ministers issued a [joint statement](#):
    - "We welcome the first meeting of the Technical Group on Measurement of APEC Trade in Value added (TiVA) under Global Value Chains and progress in completing the construction of the APEC TiVA Database by 2018. We endorse the Terms of Reference on the Operational Mechanism and work plan of the Technical Group. We urge officials and experts to collaborate with international organizations and institutions to enhance synergies in policy making, technical assistance and capacity-building."
  - Prepared "Draft Terms of Reference on the Operational Mechanism of the Technical Group on Measurement of APEC TiVA under GVCs."

## U.S. Points of Contact

Various BEA staff serve as U.S. liaisons to the OECD, UN, and UNECE efforts.

The USITC is the U.S. liaison to the APEC TiVA technical committee, which is co-chaired by the U.S. and China. The U.S. co-chair is Bill Powers, Acting Chief, Economic Research ([william.powers@usitc.gov](mailto:william.powers@usitc.gov) [202.205.3216](tel:202.205.3216)). Dr. Powers can provide the technical committee's terms of reference and work plan.

For the UN Statistical Division, Steven Landefeld, former BEA director, is overseeing the development of the handbook on a system of extended international and global accounts called for by the FOC report. At the July UNECE meeting, he gave [an overview of forthcoming work](#).
