This proposal is necessary for carriers to evaluate compliant systems. We would like to propose a modification that would recognize the likely components involved and ideally increase choice for carriers. Since ELDs may be comprised of different devices or subsystems e.g., bluetooth device connected to engine, mobile smartphone or tablet and web-based support system it would be beneficial to carriers and to vendors if vendors could certify that individual devices or components meet a subset of the technical specifications and that these components may be combined into compliant ELD systems. Allowing registration of such ELD components would speed development since vendors could focus on individual specialties and reduce costs by providing unbundled offerings.
