Comment

This is an obvious attempt by OSHA to take non work related hearing loss and make it work related. With the loud music in bars and vehicles it is a wonder anyone has normal hearing. To prevent a doctor from determining that an employee who is being protected at work has hearing loss because his car shakes from the volume of his sound system is an attempt to fill the OSHA Log so it looks like they are doing something. Anyone who sits in front of a band's speakers at a bar or dance can not carry on a conversation because they are being blasted out of their chairs some research by a health care professional can ferret out this sort of thing and keep a good employers OSHA Log clean.
