General Comment

American taxpayers are paying far too much for this endless study. the fact is we get little health care and endless study, which usually results in no money left for real health care. this agency needs to redirect our tax dollars. these studies can be done every 5 years, not on a constant yearly basis. they also can be done smaller so they cost less. and they can be done with more forethought. after all these same studies have been done by this federal agency for the last 60 years and so why do they embed too much constant "study". at this point in time, we have diminishing results for the endless "studies" that this agency wants us to pay for. we want more focus on helping us to be healthy and spending time on actual care using the best resources and less time on endless studies that go on into eternity. they have gone on into eternity. we need budgets cut on this kind of thing. I would recommend a budget cut of 50% on these studies.
