## General Comment

The data is needed to move the process forward.

The estimate of burden is accurate. The state of Nevada has spent millions of dollars stonewalling the approval process in direct contempt of the Nuclear Waste Policy Act of 1982.

There is no way to enhance the quality / utility / clarity of the information to be collected.

Electronic submissions are the most helpful methods. However, I expect that lawyer letters are what you will get no matter how hard you try to make it easier.

Nevada has no interest in this process moving forward. Their resistance should not be allowed slow the process down. Individuals that knowingly conspire to violate the intent of the Nuclear Waste Policy Act of 1982 should be held accountable via civil and criminal penalties. Their actions can be interpreted as nothing less than treason. Nuclear waste needs to be consolidated in one location underground in Nevada to preempt nuclear security threats throughout the country. Delaying this action places all US citizens in potential danger. Congress and the President have spoken. The citizens of Nevada now have to comply, 35 years later.
