Controlling carbon is kind of a bureaucrat's dream. If you control carbon, you control life," Remote Sensing Sciences in Greenland found the rate of warming in 1920-1930 was about 50% higher than that in 1995-2005, suggesting carbon dioxide COULD NOT be the cause' of warming. The world is wasting stupendous amounts of money on trying to fix something that can't be fixed." Global warming has gone "from a science to a RELIGION", research money is being funneled into promoting climate alarmism. "The climate-change people have no proof for their claims. They have computer models which do not prove anything," man-made catastrophic global warming promotion "a political football that has lost its foundations in real science." "There are no facts linking the concentration of atmospheric carbon dioxide with imminent catastrophic global warming, there are only predictions based on complex computer models. ridicules man-made global warming fears as a "MEDIA CIRCUS, Climate is a very complex system, and anyone who claims we know all there is to know about it, let's say, is charitably misinformed or chooses to be, We fool ourselves if we think we have a sufficiently well understood model of the climate that we can really predict. We can't," Geologists know that the Earth's climate has done this all the time in its history. We also know that man has not been around very long and could NOT have caused that. So we know that there are many natural forces that have caused our climate to change, whoever don't jump on the bandwagon - called DENIERS and Hitlers among other names, Some even threatened , but more they are trying to destroy thoughts and reputations, Criticizing former Vice President Al Gore's documentary An Inconvenient Truth, calling the film "a total MISREPRESENTATION of science, computer model fears of a climate DOOMSDAY . "It's an ABUSE OF SCIENCE . They are misquoting science. They are MISUSING science. They are making predictions of dire consequences in the name of science that will not come true, and science will lose its credibility. In schools, they are SCARING the heck out of our kids. ... They think they have no future, "In 10 years, you won't hear anything about global warming. over-interpretation of models is already leading to poor financial decision-making. Making detailed climate projections for regions of earth when global climate models disagree strongly. Anthropogenic (man-made) global warming bites the dust," In the study titled "Heat Capacity, Time Constant, and Sensitivity of Earth's Climate System," authored by Brookhaven National Lab scientist Stephen Schwartz. "Effectively, this [new study] means that the global economy will spend TRILLIONS OF DOLLARS trying to avoid a warming of ~ 1.0 K by 2100 A.D.," I think it's mainly just like little kids locking themselves in dark closets to see how much they can scare each other and THEMSELVES, "solutions" to global warming like changing light bulbs to fluorescent or participating in the Kyoto Protocol, IS SILLY, "If you had a decision to make which actually would matter, then, of course it would be a very difficult situation, since 1998 world generated voluminous additional carbon dioxide Yet, in spite of an all-time peak period of carbon fuels' use, it seems that NO overall global warming

phenomenon has been generated. The best way for science and public policy to proceed is to continuously assess evidence pro and con for anthropogenic global warming, Climate alarmists in particular are too prone to CHERRY PICK EVIDENCE that suits their case, IGNORING FACTORS that might disprove it. Global warming theory full of holes and RED FLAGS humans are not responsible for rising temperatures. the truth has to start somewhere." Noting that the Earth has been warming for 18,000 years, glaciers have been coming and going for billions of years. The year 1816 was known as the year without a summer. The Greenland warming of 1920-1930 demonstrates that a high concentration of carbon dioxide and other greenhouse gases is not a necessary condition for a period of warming to arise. *🌐

Comment:

Climatologist/seismologist is studying glacial seismic activity in Greenland and has chastised the media and criticized a proponent of man-made climate fears for presenting a "falling-sky" view of Greenland's climate. "I also know that there is no evidence to suggest that these quakes. Scientists Claim Computer Model Predictions are 'Useless Arithmetic' - a coastal geologist and emeritus professor The coastal models are so flawed that Geologist recommends dredging up a lot of sand and dumping it on the beach "willy-nilly" and he predicts you would end up with the same result, minus the "false mathematical certitude. Nuclear physicist, a PhD-trained scientist and a former researcher for Australia's Commonwealth Scientific and Industrial Organization (CSIRO) and the Defense Science and Technology Organization (DSTO), questioned man-made climate fears in 2007. "It has been found that warming is occurring on Pluto, Mars, Jupiter and Triton," "The last time I looked, there were NO EVIL GREENHOUSE GAS belching industries on those planets, subplanets and moons," which clearly indicated that increased solar activity was a significant factor," studies of ice core data reveals that warming precedes rising CO2 levels in the atmosphere. " it would be more correct to say that temperature changes cause CO2 concentration changes," According to the findings reviewed in his paper, the variable output of the sun, the sun's gravitational relationship between the earth and the moon and earth's variable orbital relationship with the sun, regulate the earth's climate. Statistician study which found that the solar system regulates the earth's climate. The processes by which the sun affects the earth show periodicities on many time scales; each process is stochastic and immensely complex. Meteorologist dismissed what he termed "consensus NONSENSE" on global warming. "But, just because major environmental groups, big media and some politicians are buying this hook, line and sinker doesn't mean as a TV weatherperson I am supposed to act as a puppy on a leash and follow along," All of this global warming alarmism is designed to GET YOUR MONEY and then GUILT YOU to how you live your life," a professor in the School of Economics ridiculed the notion of taking out an "insurance policy" against manmade global warming. manage as a matter of science, economics and logic this 'insurance policy' analogy is completely inappropriate and indeed grossly misleading. the entire 'risk management' argument simply cannot be sustained. A policy of emission reductions is like taking out an 'insurance policy' in which there is never any positive payoff, Research physicist, paper questioning carbon dioxide measurements in the atmosphere titled "Everyone is Entitled to Their Own Opinion But Not Their Own Facts." paper found that "it is NOT POSSIBLE to compare peaks and valleys in CO2 measurements from VOSTOK or EPICA with contemporary atmospheric time series. There is a mismatch in gas age resolutions. Peaks are flattened and valleys are fill of rice core measurements." The paper concluded, "Thus on our contemporary timescale it is not possible to say that CO2 level has not been above 300 ppm for the last 500,000 years. The same comment applies to comparing

the 'rapid' run up of contemporary CO2 levels with the ice core records where 'sharp' pulses of less than 100 years may well be smoothed away." Aerospace engineer and a physicist ; o assume that global warming is a problem is to assume that the state of Earth's climate today is the optimal climate, the best climate that we could have or ever have had and that we need to take steps to make sure that it doesn't change," head of the International Climate Science Coalition and an engineer, disputed man-made global warming fears in 2007. "Let us start with a simple question: 'Is the world warming?' The surface temperature records used by the IPCC show that it has warmed by 0.7 deg C since 1900. The world has not warmed since 1998 and temperatures have been steady since 2002. Leyland also disputed any link between man-made CO2 and temperature. Radiosonde observations published in 2006 show NO sign of faster warming. Therefore, we can be sure that man-made carbon dioxide is NOT causing global warming," . *

TAX REFORM STOP THE REGULATIONS AND COST OF REGULATION ENFORCEMENT, SAVE BILLIONS ...Regulatory dark matter, Federal Register is probably the most frequently cited measure of regulation's scope, which unintentionally highlights the abysmal condition of regulatory oversight and measurement. At the end of 2014, the page count stood at 78,978, the fifth-highest level in the Register's history . Both 2010 (81,405 pages) and 2011 (81,247 pages) were all-time record years. The 79,435 count in 2008 under George W. Bush holds the third-highest title. In keeping with the modern "pen-and-phone" ethos, of six all-time-high Federal Register page counts, five have occurred during the Obama administration. stressed accountability, noting that much law comes from agencies rather than elected lawmakers: while agencies issued 3,541 rules in 2014, Congress passed 129 laws that were signed by the president. it took 9.453 billion hours in 2013 to complete the paperwork requirements from 22 executive departments and six independent agencies. Looked at that way, 9.5 billion hours of paperwork iequivalent of 13,488 full human lifetimes, not other directives, mandates, or restrictions involved in actually carrying out regulation. Compliance officers driven by complicated new laws, regulations, and fines. per-employee regulatory costs for firms of fewer than 50 workers can be 29% greater than those for larger firms. cost estimates of the regulatory enterprise range from few billion the Office of Management and Budget bothers to proclaim (recall from part 5 that OMB has presented costs for 157 rules since 2000), through the \$2.028 trillion annually the National Association of Manufacturers (NAM) estimated in 2014 (Crain and Crain, 2014: 1), into the stratosphere according to an academic estimate of dozens of trillions in LOST GDP annually. 1994 regulatory costs at \$647 billion in 1995 dollars (US GAO, 1995), which around \$990 billion in 2013 dollars even assuming no new regulation in 20 years. (SBA), with various levels of critique and venom, have noted annual costs in the hundreds of billions, some well in excess of \$1 trillion converted into today's dollars. NAM's 2012 total annual regulatory costs in the economy of \$2.028 trillion. Each element of regulatory costs demands a dissertation for those affected but the largest components portrayed are legacy economic regulation, environmental regulation, and paperwork burdens. In the modern United Statesafter Dodd-Frank and the Affordable Care Actthe health services and financial components can be expected to expand. In any event, \$1.88 trillion omits much: most regulations' costs are never tabulated and some entire classes of government interventionsuch as antitrust, government manipulation of money, credit, and interest rates, and restricted access to resources are ignored by officialdom. In both the 112th and 113th Congresses, the House passed the REINS Act (Regulations from the Executive in Need of Scrutiny, H.E. 367) to require an expedited congressional vote on all major or significant rules before they are effective. Congress needs to broaden the REINS objection to any controversial rule, whether or not tied to a cost estimate that deems it a

major rule. Furthermore, in the era of regulatory dark matter, the requirement for congressional approval should extend further to guidance documents and other agency decrees. Congress should also explore allocating regulatory cost authority among agencies in a "regulatory budget", while distinguishing between categories like economic, health/safety, and environmental regulations. A "budget" would create incentives promoting other supervisory mechanisms like central review, cost analysis, and sunsets, and inspire agencies to "compete" with one another in terms of lives they save or some other regulatory benefit rather than think within their own box. There were 72 laws passed by Congress and signed by the president in 2013 (US GPO, 1995-2014); agencies implementing laws passed earlier issued 3,659 RULES AND REGULATIONS, 51 rules for every law. Legislatures rarely control spending, unaccountable bureaucracies, economic, environmental, and social interventions escalate. On occasions regulatory liberalization and is able to mobilize for reform, the inspiration is often smaller business burdens and job concerns. Regulatory Flexibility Act has directed federal agencies to assess their rules' effects on small businesses and describe regulatory actions under development . The 1996 Congressional Review Act (CRA) requires agencies to submit reports to Congress . Unfunded Mandates Reform Act of 1995 (P.L. 104-4) AND regulatory process is the post-New-Deal Administrative Procedure Act (APA) of 1946 (P.L. 79-404), *

Comment:

Government Regulation agencies should be courageous in goal to reduce the burdens on the American People, by transparency, insist on truth, objectivity, and demand sound science from Environmentalist (political) activists when making rules. Truth in science doesn't depend on human consensus or political correctness. The fact that the majority of journalists, elite and pundits bray like sheep and try public shaming is meaningless. Galileo, another "social dinosaur," said "the crowd of fools who know nothing is infinite skepticism is the first step towards truth. AGENCY SHOULD USE CAUTION IN DEVELOPING REGULATIONS DESIGNED BY ACTIVISTS T AMERICAN BUSINESS, FARMERS, INDUSTRIAL, FACTORY, OIL, GAS, RETAIL OUT OF BUSINESS. The media hysteria on GLOBAL WARMING has been generated by ENVIRONMENTAL ACTIVIST, carried into the street by sheep carrying signs, echoed by leaders and news , who don't understand the provisional and uncertain nature of scientific knowledge. Science changes. EXAMPLE : For years we were told that drinking coffee was bad for our health and would increase our risk for heart disease. But more recent studies have shown that not only is coffee safe for our hearts, it can decrease the risk of liver cancer and is chock full of healthy antioxidants. EXAMPLE: Article by an economist temperatures are now higher than at any time in the past 12,000 years. The fact that the thermometer wasn't invented until the year 1714 ought to give us pause when evaluating this remarkable claim. Reconstructions of past temperatures are not measurements, but estimates. These estimates are based on innumerable interpretations and uncertain assumptions, all invisible to someone who only reads the headline. Better studies -- completely ignored by the major media -- have shown that late-twentieth-century temperatures are not anomalous or unusually warm. EXAMPLE OF SHAMING: Consensus" is another word for clique science. The good people are true believers, the bad people exhibit a "will to disbelieve." Editors used to salute healthy skepticism. Now some are global-warming Torquemada. EXAMPLE : A major researcher working in the area of climate change said, the factual record needed to be altered so that people would become alarmed over global warming. He said, "We have to get rid of the Medieval Warm Period." How CORRUPT AND IDEOLOGICALLY driven current climate research can be. USE OF LOGIC meteorologists can't predict what the temperature will be in 30 days. How is it that we are supposed to believe that they can reliably forecast what the temperature will be in 50 years? They can't, because Earth's climate system is complex and poorly understood. USE OF LOGIC Copenhagen Consensus, a group of scientists and economists that looks at the best way to spend a hypothetical \$50 billion to benefit mankind, rated fighting global warming as a "bad" use of money. USE OF LOGIC GLOBAL WARMING is a religion, not science. That's why acolytes in the media attack global-warming critics, not with scientific arguments, but for their apostasy. One of the common claims in support of the reality and seriousness of global warming is that we have had a large portion of record breaking warm years during the last decade or so. This is not a claim used by the IPCC, and its

presence in any discussion is a rather clear piece of evidence of the intent TO DECEIVE, especially when the claim is made by a scientist. As noted by Solow and Broadus (1989) and Bassett (1992), this is an inevitable occurrence when one has a single record breaker in a time series characterized by inter-annual variability, inter-decadal variability and an underlying trend or longer period variability. Solow and Broadus show the clustered nature of record breakers. For those who can follow some mathematics, the situation is easily synthesized. where the first term corresponds to interannual variability, the second term to interdecadal variability, and third to longer term trends or variability. Not surprisingly, record breakers cluster in exactly the manner found by Solow and Broadus (1989) in the observed temperature record. The occurrence of such record breakers contributes NO additional information. Our prime concern remains with the determination of trend and the identification of such trends with emissions of carbon dioxide, and this remains a difficult and contested issue as the IPCC freely acknowledges. KNOWN AS SCIENTIFIC WAFFLING There has been no effect on countries from any current change, Efforts by activists to establish such a link "is why NO ONE can trust the Green activists. More Transparencies in Agencies with Truth in Settlements Act of 2015 and Miscellaneous Receipts Act . RESCIND use of Clean Development Mechanism (CDM) , REPEAL Dodd-Frank. Investigate Bitcom. *🌐
