i do not believe aphis can monitor this since they have allowed 10,000 invasive species of plants, insects, animals to enter this care in the world, impacting negatively every citizen in this country pay taxes to wipe out the species that have entered this country

aphis is not equal to this task. it is doing a very substandard job wasting millions of taxpayer dollars with no good result for an thousands of insects wiping out trees and bushes, the fungus

allowed to enter this country, the invasive plants that are taken are all huge users of tax dollars to kill.

aphis cannot be trusted with this job. we need an audit of this agency. it is performing substandard for the american people. toxic species to enter and leave this country. its work is substandard
