MEMORANDUM

To: Freight Rail Carriers, Hazardous Material Shippers and Receivers

Date: May 04, 2017

Re: 49 CFR 1580.101

In accordance with 49 CFR 1580.101, the Transportation Security Administration (TSA) hereby issues a revised version of the Rail Security Coordinator Reporting Guidance. The Rail Security Coordinator Designation Guidance replaces the Rail Security Coordinator Reporting Guidance.

The revised guidance differs from the original guidance in the following areas:

- Change in title terminology from "reporting" to "**designation**";
- Added the option for a regulated party with an RSC that is responsible for multiple subsidiary railroads or plant sites to include the name of all railroads or identify all the plant sites as appropriate as part of one e-mail or postal mail notification to TSA instead of a separate notification for each affected railroad or plant (Section 1).

If you have questions, please contact a Freight Railroad Representative at FreightRailSecurity@tsa.dhs.gov.

Rail Security Coordinator Designation Guidance

(For Freight Rail Carriers, Hazardous Materials Shippers and Receivers)

Pursuant to 49 CFR 1580.101, covered entities are required to designate and report to the Transportation Security Administration (TSA) a Rail Security Coordinator (RSC) and at least one Alternate RSC, to be available to TSA on a 24-hour per day basis. The RSC and Alternate RSC will serve as the primary contact for receipt of intelligence information and other security-related activities.

Covered entities consist of the following:

- Each freight railroad carrier that operates rolling equipment on track that is part of the general railroad system of transportation;
- Each rail hazardous materials shipper;
- Each rail hazardous materials receiver located within a High Threat Urban Area (HTUA);
- Each freight railroad carrier hosting the passenger operations described in 49 CFR 1580.1(a)(4); and
- Each operator of private cars, including business/office cars and circus trains, on or connected to the general railroad system of transportation, when notified by TSA in writing, that a threat exists concerning that operation.

Covered entities can notify TSA of their rail security coordinator(s) in one of two ways:

1) RSC information can be e-mailed to TSA at FreightRailSecurity@tsa.dhs.gov, and include the following information:

- For each RSC and alternate RSC:
 - Full name
 - Title
 - Mailing address
 - Name of the railroad or facility for which the RSC is responsible. (For fixed facilities include the address of the facility)
 - If the RSC is responsible for multiple subsidiary railroads or multiple plant sites, covered entities have the option to include the names of all railroads or identify all of the plant sites as appropriate in a single notification to TSA instead of multiple ones.
 - Phone numbers (primary office, mobile, 24 hour contact, and fax if applicable)
 - E-mail address
- Phone number that TSA can call to obtain RSSM car location and shipping information, as required by 49 CFR 1580.103

2) The RSC information can also be submitted to TSA via postal mail by sending a letter to:

Transportation Security Administration
Office of Security Policy and Industry Engagement
Surface Division, TSA-28
(Freight Rail RSC Update)
601 South 12th Street
Arlington, VA 20598-6028

Pursuant to 49 CFR 1580.101, covered entities are required to notify TSA within seven calendar days when any of the above RSC information changes. Changes can be sent to TSA via FreightRailSecurity@tsa.dhs.gov.

See 49 CFR 1580.101 for detailed information
