General Comment

the illness in usa food is allowed by the usda which allows dicamba, glyphosate, chloropyrifos to be used to poison the earth and the food that comes from it. the usda is behind the effort to not let the public know which foods are get and which are not ge because they will not allow labelling showing a contempt for the u.s. public. the usda allows endless abuse of factory farmed animals, so that they dont have a decent day when they are not abused in their short lives. the usda has become an ugly, virulent moneygrubbing agency that does not allow consumers to have any say in our food. its just moneymaking for the usda. the vast corporations that are producing our food in fact get our tax dollars to produce this crap that we are eatign and that is poisoning and killing us in america these days. americans have shorter lives than ever because they have lives of sickness. cancer is rampant from teh crap food we eat. the animals are fed chemicals to make them grow fat. and then the dead meat from these animals make americans grow fat. and you can see from the sick animals that is why people are getting sick and hospitalizing. the hospital costs are going up up up because the food is full of crap. the usda is a nasty agency deserving of an f minus agency. i dont think this agency can stop the horror becaus they keep cutting inspections and they kill the animals - slaughter them at the rate of about 600 an hour or more. the speed at which the slaughter lilnes run means that the animals are being killed mercilessly. being boiled alive. having their parts cut off whiel they are alive.

the slaughtehouses run through this agency ar ea horror. the fact is the usda also runs the aphis wihich kills manymillions oif wildlife elvery year too. the entire sspectre of the usda is pure horror and vile results. this comment is for the publi record. this agency has no real interest in stopping food contamination. it take zero steps to do so. its grade is f minus
