Comment

we need to stop issuing these publications for a while because the work of the cdc is so spectacularly inaccurate and propagandistic to building up moneys for the division. they use number to try to getmore tax dolalrs. their death reports from flu are seriously discriminatory and carelessly done. people with allkinds of diseases get flu shots and then they die and there is no autopsy but because its its in febraury the locals call it a flu death, which is inaccurate because there has been no autopsy done to fully ascribe wehterh it was the heart condition, the liver disease, the brain disease or the hiv that really killed him its time to stop issuing these reports to stir this country into hysteria and into doiong whatever big pharma wants to make in trillions of dollars with flu shots, so that we can get accurate information. I don't believe the death reports from flu at all because I under stand how carelessly they are accumulated. nobody in America should believe them. these reports need to find a way to more carefully study what really kills someone before they just put any old label on it. we are getting propagandistic lies from the cdc.
