Comment:

California shame on you for not allowing forest service and electric company to manage forest . Scientists study estimated that Fires in US release millions metric tons of carbon dioxide per year. Wildfires can produce more greenhouse gas (GHG) emissions then gas and oil , therefore we should manage forest better by stopping the regulations against clear cutting to help prevent co2 from mass wildfires in western states. US Forest service page; fuels buildup to unnatural levels and forests become overcrowded. This led to forests being more susceptible to insects and disease outbreaks, but also to unnaturally large fires on the landscape. California Governments failure is unarguable with Forest management and wildfires. That failure is generally excused by labeling wildfires as an act of nature, thus uncontrollable and unpreventable, that excuse unacceptable. A California governments primary responsibilities; to secure the life, liberty, and property of its citizens. Wildfires in 2018 have killed animals, wildlife and people, consumed hundreds of homes, and infringed upon freedom of movement of hundreds of thousands. Staggering 129 million dead trees in California. The USDA Forest Service should focus on mitigating hazard trees by logging and thinning overly dense forests so they are healthier and better able to survive stressors like this in the future. Radical environmental groups would rather watch the entire forest burn down than harvest a single tree. This country imports timber. Its better to recycle the timber and clean up our forest. *🌐
