### Comment

Hello,

My name is Jacqueline Keeler and I am a student from Western Michigan University who studies biology and environmental sciences. I am not in favor of the new framework proposal about loosening the regulations in the proposed rule titled "Movement of Certain Genetically Engineered Organisms". I believe that loosening the regulations and making it so that if a plant is similar to an already approved plant, there is no need for it to be inspected. I believe that all GMO products need to be tested and analyzed. When pesticides are genetically altered into the plants that we eat there needs to be long term studies, researching potential effects on human health. I believe that these issues are worth putting tax dollars toward.
