In RE: FS-2019-0004-0001 Federal Register Number 2019-08320
The Forest Service has a duty and responsibility as well as an interest in the land use situation of the properties it manages. Use of the SF-299 Form for easements and right of way application is appropriate but information gathering can be improved. Events point the moral sometimes. Once a project begins, the connection between land use decisions and who it affects can become a moot issue. Although 36 CFR Part 251 in part governs use, occupancy and rights of way reserved by a grantor of lands to the United States, the application form above could be further enhanced thus streamlining the process if the following elements of the work are brought out specifically: Liability issues and cleanup responsibility including compensation to the government landowner. In construction, uses such as depth of cover, impact on roads, construction methods and time of year when construction will occur. There are undoubtedly reciprocal forces that bind federal agencies together and it is essential that decisions based on the application are made so that it does not make for a maladjusted land use system. *🌐
